

ERICK COSTA SOARES CUNHA

São Paulo, Brazil | +55 11 97537-8432 | cunhaerick88@gmail.com

PROFESSIONAL SUMMARY

Full Stack & Backend Software Engineer with experience in designing, building, and maintaining scalable web applications, RESTful APIs, and distributed microservices using Python (FastAPI, Django), Node.js (NestJS), React, and PostgreSQL. Proven track record in developing internal enterprise systems, optimizing database performance, implementing OAuth2/JWT security, and engineering workflow automations with Python and n8n in containerized Docker environments.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, PHP

Backend & Frameworks: NestJS, FastAPI, Django, Node.js, RESTful APIs, SQLAlchemy, OAuth2, JWT

Frontend: React, Vue.js, JavaScript, HTML5, CSS3

Databases: PostgreSQL, Database Design, Query Optimization

Automation & Tools: Python Automation, n8n Workflows, Shell Scripting

DevOps & Infrastructure: Docker, Git, GitHub, CI/CD

PROFESSIONAL EXPERIENCE

Dynamic Air — Software Developer / Systems Analyst | 06/2026 – Present

- Design and develop full-stack internal enterprise systems to optimize operational workflows using **React** on the frontend and **NestJS (Node.js/TypeScript)** on the backend.
- Architect scalable RESTful APIs, implement clean backend architecture, and manage relational database models for internal applications.
- Collaborate with cross-functional teams to streamline business processes and improve data integration across internal tools.

Exponencial CTI — Backend Software Engineer / Systems Analyst | 2024 – 2026

- Designed and maintained high-performance RESTful APIs using **Python (FastAPI, SQLAlchemy)** and **PostgreSQL** in containerized Docker environments.
- Engineered secure user authentication and authorization modules using **OAuth2 and JWT**, securing critical API endpoints across applications.
- Designed relational database schemas and optimized complex SQL queries, improving backend response times and data integrity.
- Developed scalable web applications for public sector organizations using FastAPI and Vue.js, streamlining administrative operations.

Ápice Contabilidade — Python Developer | 2022 – 2024

- Built custom automation scripts and integration workflows utilizing **Python** and **n8n**, eliminating repetitive tasks for internal accounting teams.
- Developed backend scripts to interact with third-party APIs and legacy databases, improving cross-platform data synchronization.
- Accelerated business process execution and significantly reduced manual data entry errors across key operational areas.

KEY PROJECTS

Public Sector Enterprise Systems

Technologies: Python, FastAPI, SQLAlchemy, PostgreSQL, Docker, Vue.js, JavaScript

- Developed robust backend microservices and interactive user interfaces for large-scale public management platforms. Implemented OAuth2 access controls and containerized applications with Docker.

Workflow & API Automation Suite

Technologies: Python, n8n, REST APIs, PostgreSQL

- Architected end-to-end automation pipelines connecting internal financial systems with external web services, maintaining full audit logging.

EDUCATION & CERTIFICATIONS

Certifications: Python, JavaScript, SQL, and Django Architecture — Hashtag Treinamentos

Education: High School Diploma
